EXPERIENCE

Gwanak Lab · AI fintech startup

2025.01 – Present · Frontend (frontend lead since 2026.05)

GLAB · AI digital private banker app

2025.12 – Present

AI investment advisory app for retail investors (launched 2026.07). Own the frontend from planning to release and operations; frontend lead since 2026.05 (release schedule, two teammates). Wrote half of the team's feature PRs (278) and reviewed 149.

- Started without designs: built shared components and theme tokens, then Home, AI chat, Explore and Portfolio
- Limited the full-screen re-render on every AI chat streaming token to the last message
- Fixed a race condition that froze the live ranking; the price animation renders only changing rows (29 → 3+ per digit)
- Kakao, Google and Apple sign-in and account deletion; Apple deletion on Android solved with a web bridge
- Shipped iOS, Android and web (PWA) from one codebase: 5 production releases in 4 months; OTA skips apps on another native version
- Set up S3 and CloudFront; automated web deploys for 3 environments and OTA publishing with GitHub Actions
- Designed and built the 21-screen operations admin web (scheduled notices, terms, app versions, data masking)

Service App Store · Google Play · Website · Press (KR)

Expo · React Native · TypeScript · TanStack Query · Zustand · NativeWind · Firebase Auth **Details (KR) →**

LG CNS COP · Generative AI image editing platform

2025.01 – 2025.11

Client project for LG CNS. Designed and built the entire ADMIN frontend and the shared base of the service frontend.

- Fixed duplicate token refreshes and lost requests on simultaneous 401s: refresh once, then resend the waiting requests
- Built every ADMIN screen (usage, credits, accounts, groups, notices, policies) and access control for 4 roles on schedule
- Added permission limits, amount validation and a confirmation step to credit issuance
- Introduced pre-commit lint and type checks and automated S3 and CloudFront deploys
- Unveiled at AI Festa (press); opened as the Sandoll Cloud AI Studio beta (about 2,000 users)

React · TypeScript · TanStack Query · Zustand · Zod · Tailwind **Details (KR) →**

TmaxGaia

2022.01 – 2025.01 · Web office frontend

GAIA OFFICE Chart

2022.01 – 2025.01

Charts for the web office suite. From 2022.09, owned the whole chart feature and mentored new hires.

- Rendering per series instead of per data point cut components to 1/100: **large charts 10,000ms → 100ms**, 30×30 insert 11s → 2s
- Designed the chart model and component tree, OOXML import/export, and error bars matching Excel's values
- Tested chart models, undo/redo commands and rendering hooks with Jest and React Testing Library (46 files)

React · TypeScript · MobX · Victory **Details (KR) →**

GAIA OFFICE Cell · Web spreadsheet

2022.06 – 2025.01

Number formats, merging and pivot tables for the web spreadsheet. Took part in an NTIS national R&D project.

- Whole-sheet merge (about 17 billion cells) froze the app; copying only the data range finishes within 2s (wide ranges 10s → 1.5s)
- Batched canvas rendering to once per command: 5 render calls → 1
- Implemented Korean date, elapsed time, currency and decimal rules missing from the number format library
- Handled about 555 issues in 2 years (35% outside my features); designed section management and DB for the auto-fill task force

React · TypeScript · Canvas · Java **Details (KR) →**

PERSONAL PROJECTS

Dolt2 · Shared bucket list app

2026.10 – Present · iOS released, Android planned

Planning, app, Supabase backend, intro and share web pages, App Store review and release.

- Change-based sync that survives concurrent edits and repeated sends, verified with Jest
- 61 RLS policies restricting access to space members; OTA, forced updates and error collection

Expo SDK 58 · Supabase · Zustand · Jest **Details (KR) →** **App Store →** **Website →** **GitHub →**

Month · Medication reminder app

2026.10 – Present · In development

Android native module (Kotlin) so the home screen widget follows the date without opening the app; 66 Jest tests and CI.

Expo SDK 58 · expo-widgets · Kotlin · SQLite · Jest · GitHub Actions **Details (KR) →**

SKILLS

Core	TypeScript, React, React Native (Expo), TanStack Query, Zustand, Tailwind/NativeWind
Experience	Next.js, MobX, Canvas, Firebase Auth, Supabase, EAS Build/Update, GitHub Actions, AWS S3·CloudFront, PostHog, Zod, React Hook Form, Jest, React Testing Library, Kotlin, Java·SQL

EDUCATION · OTHER

Oregon State University	Computer Science (Security) · GPA 3.89/4.0, Summa Cum Laude · 2017.09 – 2021.06
KOREATECH	Computer Engineering · 2013.02 – 2018.07 (left to transfer to OSU)
Languages · Military	Korean (native), English (conversational, 5 years abroad) · Military service completed (ROK Air Force)

AWARDS · SCHOOL PROJECTS

BeaverHacks Spring 2021 (OSU fintech hackathon) · 3rd of 17 teams

2021.04

Crypto auto-trading bot (team of 2). Built the volatility breakout strategy and the Upbit API integration; reports trades to Slack.

Python · Upbit API · PyQt5 **Result →** **GitHub →**

iOS Gesture Alphabet · OSU capstone project

2021

Accessibility app that turns device motion gestures into letters for text input.

Swift
